The plots show the distribution of jets for different categories in the CMS simulation from 13 TeV, 2016. The x-axis represents the SE and SM discriminators, while the y-axis represents the number of jets per 0.02 units.

- **Left Plot**: The categories are b jets, c jets, udsg jets, and + jets. The discriminator is used to distinguish between these categories.
- **Right Plot**: The discriminator is 13 TeV, 2016 CMS Simulation.
