The image contains a plot from the CMS experiment. The plot shows the jet-to-$\tau_h$ MisID probability for e$\mu$+jets events as a function of $\eta^{\text{jet}}$. The axes are labeled as follows:

- Y-axis: jet $\rightarrow \tau_h$ MisID probability
- X-axis: $\eta^{\text{jet}}$

The plot includes two lines:
- Observed: represented by black triangles
- Simulated: represented by red triangles

The observed data is compared to the simulated data, and the plot includes an observed/expected ratio. The CMS logo and the experiment's data point are noted as 35.9 fb$^{-1}$ (2016, 13 TeV).
