$\mu^+ + 3j, 2t$

Data points are shown as black circles. The background is represented by a blue shaded area. The postfit uncertainty is indicated by a hatched area. The observed to expected ratio is plotted against the minimum mass of the $l,b$ pair in [GeV].

The figure shows the comparison of data and theoretical predictions for the $\mu^+ + 3j, 2t$ channel, with postfit and prefit uncertainties indicated.
