CMS 8 TeV

The graph shows the HLT-only efficiency as a function of pseudorapidity ($\eta$). The data points are represented by different markers:
- Black circles: Isolation + Calold OR R9
- Red squares: Isolation + Calold
- Blue triangles: R9

The y-axis represents the HLT-only efficiency, ranging from 0 to 1, and the x-axis represents the range of $\eta$ from -3 to 3.
